Events
How we listen to events

- In order to register event handlers we can:

- Add event listener - button.addEventListener('eventName', callback)

- Html attribute <button onclick="alert('Hello world!')>

- DOM element properties myButton.onclick = function (event) {alert('hello world')};

Events
Events examples

- Button : click

- Input: focus, blur, keyup

- Select: change

- Mouse events: Mouseenter, mouseleave

- element.addEventListener('focus', eventHandlerFunction)

- element.addEventListener('change', eventHandlerFunction)

-
