Starting a project
Project Requirements and Use Cases

Created by Aleksander Apostolidis
PHP Fullstack course, Code Academy 2020

Requirements Document
GigHub Project

- GigHub is a mini social network that makes it really easy for live music lovers to track the gigs of their favorite artists.

- Artists can sign up and list their gigs. When adding a gig, they should specify the date/time, location and genre of the gig.

- An artist should have a page called My Upcoming Gigs. From there, they should be able to edit or remove an existing gig, or add another gig to the list.

- Users should be able to view all upcoming gigs or search them by artist, genre or location.They should be able to view details of a gig and add it to their calendar.

- Additionally, users should be able to follow their favorite artists. When they follow an artist. they should see the upcoming gigs of their favorite artists in the Gig Feed.

Use Cases

- Use Cases are the high level features from requirements document, we should express this use cases only in few words.

- Artists can sign up and list their gigs. When adding a gig, they should specify the date/time, location and genre of the gig.

- In this paragraph we have 2 use cases: Sign up and List their Gigs
